

Measuring Guide for Electric Panel Heater Guards

How to Measure for a Panel Heater Guard

Measuring for panel heater guards is not as hard as you would think. Just follow our step by step instructions and we will do the rest.

1. Measure the height of your panel heater (H)
2. Measure the width of your panel heater (W)
3. Measure the depth of your panel heater (D)

Height: of Heater (NOT to the floor)

Width: of Heater (the widest point)

Depth: of heater (from the wall to the front of the heater)

Optional Extras Available:

Sloping Tops: can be added to prevent the storage heater guards being used as a shelf

Access Flaps: can be added so you can still gain access to the controls
We will confirm the location and dimensions for the access flap once the order has been placed
